

Environmental Services, Inc.

General Regulatory Compliance

Features:

- Compliance for Multiple Facilities
- HMBPs, SPCCs & Compliance Audits
- Air Permit Updates
- Sanitary Sewer Sampling
- DTSC Voluntary Cleanup Agreement
- Site Remediation and Monitoring

For this large industrial client, Pangea personnel have been providing regulatory compliance services for up to 10 years at select facilities. Pangea personnel assist with a wide range of needs, and offer institutional knowledge otherwise lost due to employee changes within the facilities.

Most recently Pangea conducted sanitary sewer sampling as part of a self-monitoring program to confirm the hazardous materials within the facility do not impact the local sanitary sewer. At another facility their tenant is installing subslab piping through a site cap, which is part of the remedy

used in a DTSC Voluntary Cleanup Agreement. Pangea is overseeing site activities and interacting with the DTSC. For yet another facility Pangea is conducting groundwater monitoring and implementing a remedial program for residual hydrocarbons. Other needs include occasional compliance audits to prepare for annual CUPA inspections, completion of annual air permit update forms for the BAAQMD, and updating SPCCs and HMBPs for their large facilities.
